Test Report

Prepared for: Taser International, Inc.

Model: AX1006

Description: Body Worn POV Camera System

Serial Number: DVR FCC TEST1, DVR FCC TEST4, Controller FCC TEST1

FCC ID: X4G-S00146

IC: 8803A-S00146

To

FCC Part 15.247

Date of Issue: January 11, 2017

On the behalf of the applicant:

Taser International, Inc.
17800 N. 85th St.
Scottsdale, AZ 85255

Attention of:

Bryan Chiles, Technical Compliance Manager
Ph: (480)502-6260

Test Report Revision History

Revision	Date	Revised By	Reason for Revision
1.0	November 28, 2016	Alex Macon	Original Document
2.0	December 8, 2016	Alex Macon	Included example of duty cycle measurement Added G mode OCBW data Added note to page 12 Updated Annex A and C with band edge data. Updated G mode output power. Added PSD summary tables
3.0	December 12, 2016	Alex Macon	Updated Duty Cycle correction plots
4.0	December 14, 2016	Alex Macon	Removed 15.207 data Added "protocols" to note on page 12 Updated equipment utilized list
5.0	December 15, 2016	Alex Macon	Removed LISN's from Test Equipment Utilized table
6.0	December 16, 2016	Amanda Reed	Changed model name
7.0	December 29, 2016	Amanda Reed	Updated zip code
8.0	December 30, 2016	Alex Macon	Updated standard dates on page 8 Added Antenna information to page 7
9.0	January 9, 2017	Alex Macon	Updated test result summary
10.0	January 10, 2017	Alex Macon	Added Annex E: Occupied Bandwidth plots to the report. Removed tabular data regarding DTS bandwidth

ILAC / A2LA

Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to the joint ISO-ILAC-IAF Communiqué dated January 2009).

The tests results contained within this test report all fall within our scope of accreditation, unless noted below.

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

Testing Certificate Number: **2152.01**

FCC Site Reg. #349717

IC Site Reg. #2044A-2

Non-accredited tests contained in this report:

N/A

The applicant has been cautioned as to the following

15.21 - Information to User

The user's manual or instruction manual for an intentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.27(a) - Special Accessories

Equipment marked to a consumer must be capable of complying with the necessary regulations in the configuration in which the equipment is marketed. Where special accessories, such as shielded cables and/or special connectors are required to enable an unintentional or intentional radiator to comply with the emission limits in this part, the equipment must be marketed with, i.e. shipped and sold with, those special accessories. However, in lieu of shipping or packaging the special accessories with the unintentional or intentional radiator, the responsible party may employ other methods of ensuring that the special accessories are provided to the consumer without an additional charge.

Information detailing any alternative method used to supply the special accessories for a grant of equipment authorization or retained in the verification records, as appropriate. The party responsible for the equipment, as detailed in § 2.909 of this chapter, shall ensure that these special accessories are provided with the equipment. The instruction manual for such devices shall include appropriate instructions on the first page of text concerned with the installation of the device that these special accessories must be used with the device. It is the responsibility of the user to use the needed special accessories supplied with the equipment.

Standard Test Conditions Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.10-2013 and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104°F) unless the particular equipment requirements specified testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Measurement results, unless otherwise noted, are worst-case measurements.

Environmental Conditions		
Temperature (°C)	Humidity (%)	Pressure (mbar)
22.7 – 24.3	25.1 – 35.6	967.8 – 972.5

EUT Description

Additional Information:

The EUT is a wireless POV camera utilizing 2.4GHz WiFi and BLE. It is designed to be used by police officers.

The EUT incorporates a chip antenna with typical peak gain of -6dBi between 2400 and 2500 MHz.

EUT Operation during Tests

The EUT was placed into a test mode by the manufacturer. The manufacturer was present during all testing

Accessories:

Qty	Description	Manufacturer	Model	S/N
1	Controller	Taser	N/A	N/A

Cables:

Qty	Description	Length (M)	Shielding Y/N	Shielded Hood Y/N	Ferrite Y/N
1	UFL to SMA	<.2	Y	Y	N

Modifications: None

No.	Manufacturer	Part #	Antenna Type	Peak Gain
1	Taser	VGAP-CLB-AS-A1	Chip	-3.0 dBi Typ.

15.203: Antenna Requirement:

- ☒ The antenna is permanently attached to the EUT
- ☐ The antenna uses a unique coupling
- ☐ The EUT must be professionally installed
- ☐ The antenna requirement does not apply

Test Results Summary

FCC 15.247 Specification	Test Name	Pass, Fail, N/A	Comments
15.247(b)	Peak Output Power	Pass	
15.247(d), 15.209(a), 15.205	Conducted Spurious Emissions	Pass	
15.247(d), 15.209(a), 15.205	Radiated Spurious Emissions	Pass	
15.247(d), 15.209(a), 15.205	Emissions At Band Edges	Pass	
15.247(a)(2)	Occupied Bandwidth	Pass	
15.247(e)	Transmitter Power Spectral Density	Pass	
15.207	A/C Powerline Conducted Emissions	N/A	EUT is DC powered

Conducted Output Power

Engineer: Alex Macon

Test Date: 10/18/16

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Spectrum Analyzer was set to the following:

RBW = 1-5% of the OBW, not to exceed 1MHz
VBW $\geq 3 \times$ RBW, RMS Detector
Number of points in sweep $\geq 2 \times$ span / RBW
Trace average at least 100 traces in power averaging mode

The EUT was set to transmit on the lowest, middle and highest frequencies at the maximum power level. The RF output power was measured using the spectrum analyzer's channel power function. A duty cycle of >98% was achievable for B mode and BLE. A duty cycle of 34% was achievable for G and N Mode. KDB 558074 Method AVGSA-2 was referenced to obtain a correction factor of 4.68 dB. "Add $10\log(1/0.34)$ "

Test Setup

Transmitter Output Power

G Mode

Tuned Frequency (MHz)	Measured Value (dBm)	Duty Cycle Correction (dB)	Corrected Value (dBm)	Specification Limit	Result
2412	14.07	4.68	18.75	1 W (30 dBm)	Pass
2437	14.02	4.68	18.7	1 W (30 dBm)	Pass
2462	14.11	4.68	18.79	1 W (30 dBm)	Pass

N Mode

Tuned Frequency (MHz)	Measured Value (dBm)	Duty Cycle Correction (dB)	Corrected Value (dBm)	Specification Limit	Result
2412	12.17	4.68	16.85	1 W (30 dBm)	Pass
2437	12.15	4.68	16.83	1 W (30 dBm)	Pass
2462	11.90	4.68	16.58	1 W (30 dBm)	Pass

B Mode

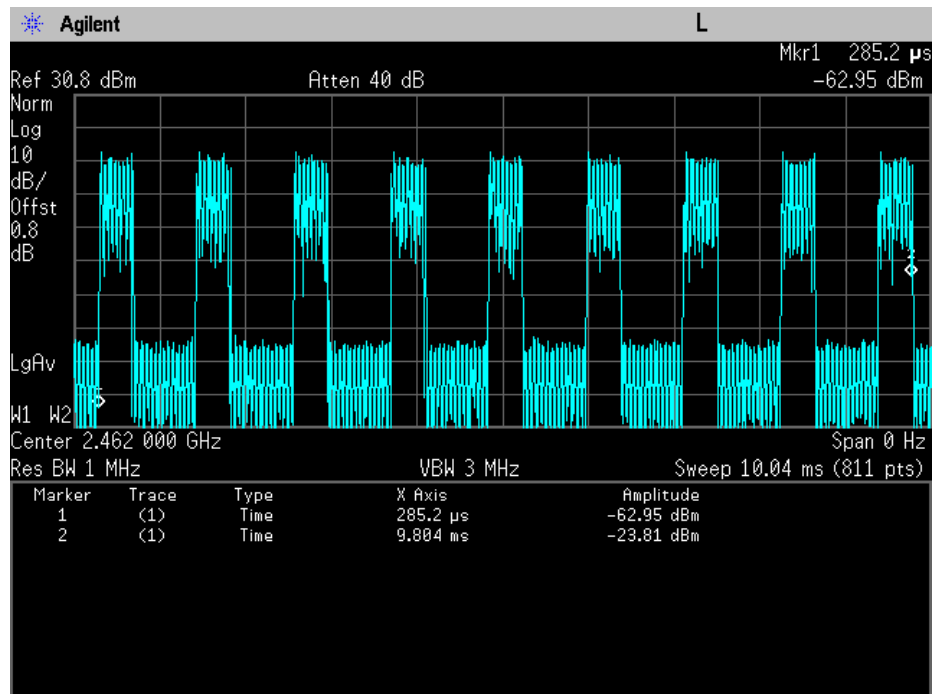

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2412	18.20	1 W (30 dBm)	Pass
2437	18.23	1 W (30 dBm)	Pass
2462	18.26	1 W (30 dBm)	Pass

BLE

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2402	9.41	1 W (30 dBm)	Pass
2440	8.78	1 W (30 dBm)	Pass
2480	8.44	1 W (30 dBm)	Pass

Example of Duty Cycle Measurement:

Conducted RF Measurements (15.209)

Engineer: Alex Macon

Test Date: 11/17/16

Test Procedure

Antenna-port conducted measurements were performed as an alternative to radiated measurements for demonstrating compliance in the restricted frequency bands for 15.209.

The following offsets were added to the measurements:

The maximum transmit antenna gain (in dBi) to the measured output power level to determine the EIRP level

A maximum ground reflection factor to the EIRP level, 6 dB for frequencies ≤ 30 MHz, 4.7 dB for frequencies between 30 MHz and 1000 MHz, inclusive and 0 dB for frequencies > 1000 MHz.

The following equations were used to determine the field strength from the conducted values.

$E[\text{dB}\mu\text{V/m}] = \text{EIRP}[\text{dBm}] - 20 \log(d[\text{meters}]) + 104.77$, where E = field strength and $d = 3\text{m}$

$E[\text{dB}\mu\text{V/m}] = \text{EIRP}[\text{dBm}] + 95.2$, for $d = 3$ meters.

The Spectrum Analyzer was set to the following:

The Spectrum Analyzer was set to the following for emissions > 1000 MHz:

- a. RBW = 1 MHz
- b. VBW ≥ 3 MHz
- c. Detector = Peak.
- d. Sweep time = auto
- e. Trace mode = max hold
 1. Note: For emissions where the peak exceeded that of the average 15.209 emission limit the following was performed.
- f. RBW = 1 MHz
- g. VBW $\leq \text{RBW}/100$ (i.e., 10 kHz) but not less than 10 Hz

For emissions below 1000 MHz the Spectrum Analyzer settings were as follows:

- a. RBW = 100 kHz
- b. VBW ≥ 300 kHz
- c. Detector = Peak
- d. Sweep time = auto
- e. Trace mode = max hold

The EUT was connected to a spectrum analyzer to verify that the EUT met the requirements for spurious emissions. The EUT was set to transmit on the lowest, middle and highest frequencies at the maximum power level. The frequency range from 30 MHz to the 10th harmonic of the fundamental transmitter was investigated.

Test Setup

See Annex A for test data

Radiated Spurious Emissions

Engineer: Alex Macon

Test Date: 11/21/16

Test Procedure Radiated Spurious Emissions: 30 – 1000 MHz

The EUT was setup in a semi-anechoic test chamber set 3m from the receiving antenna. The output of the transmitter was connected to a non-radiating balance load. The EUT was set to transmit on the lowest, middle and highest frequencies at the maximum power level. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Emissions. The EUT was tested by rotating it 360° with the antennas in both the vertical and horizontal orientation and was raised from 1 to 4 meters to ensure the TX signal levels were maximized.

All emissions from 30 MHz to 1 GHz were examined.

Measured Level includes antenna and receiver cable correction factors.

Correction factors were input into the spectrum analyzer before recording “Measured Level”.

RBW = 100 KHz

VBW = 300 KHz

Detector – Quasi Peak

Test Setup

Test Procedure for Radiated Spurious Emissions above 1 GHz

The EUT was setup in a semi-anechoic test chamber set 3m from the receiving antenna. The output of the transmitter was connected to a non-radiating balance load. The EUT was set to transmit on the lowest, middle and highest frequencies at the maximum power level. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Emissions. The EUT was tested by rotating it 360° with the antennas in both the vertical and horizontal orientation and was raised from 1 to 4 meters to ensure the TX signal levels were maximized.

Test Setup

*Note: All modulations and protocols were investigated. Only the emissions associated with the highest amplitude modulation are included.

See Annex B for Test Data

Conducted Spurious Emissions

Engineer: Alex Macon

Test Date: 10/19/16

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Spectrum Analyzer was set to the following:

RBW = 100 kHz

VBW $\geq 3 \times$ RBW

Peak Detector

Trace mode = max hold

Sweep = auto couple

Frequency Range = 30MHz – 10th Harmonic of the fundamental

The EUT was set to transmit on the lowest, middle and highest frequencies at the maximum power level. The trace was allowed to stabilize. All emissions were investigated to insure they were attenuated from the peak fundamental by at least 20dB. If the average power levels were measured then the out-of-band emissions needed to be attenuated by 30dB. In addition emissions were investigated at the band edges to insure all out-of-band emissions were attenuated 20 or 30dB as necessary.

Test Setup

See Annex C for Test Data

DTS Bandwidth

Engineer: Alex Macon

Test Date: 10/18/16

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Spectrum Analyzer was set to the following:

RBW = 100 kHz

VBW $\geq 3 \times$ RBW

Peak Detector

Trace mode = max hold

Sweep = auto couple

Span = 1.5 x EBW

The EUT was set to transmit at the lowest, middle and highest channels of the band at the maximum power levels. The maximum width of the emission that was determined by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that were attenuated by 6db and this value was used to determine the width of the carrier. Alternatively the spectrum analyzer's automatic bandwidth capability was used.

Test Setup

See Annex E for Test Data

Transmitter Power Spectral Density (PSD)

Engineer: Alex Macon

Test Date: 10/19/16

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Spectrum Analyzer was set to the following:

DTS channel center frequency
Span 1.5 x DTS bandwidth
RBW = 3 kHz ≤ RBW ≤ 100 kHz
VBW ≥ 3 x RBW
Peak Detector
Sweep time = auto couple
Trace mode = max hold

The EUT was set to transmit at the lowest, middle and highest channels of the band at the maximum power levels. Once the trace has stabilize the peak marker was used to determine the peak power spectral density.

Test Setup

BLE

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2412	-5.42	8 dBm	Pass
2437	-5.20	8 dBm	Pass
2480	-6.21	8 dBm	Pass

B Mode

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2412	-4.45	8 dBm	Pass
2437	-4.24	8 dBm	Pass
2462	-4.36	8 dBm	Pass

G Mode

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2412	-9.50	8 dBm	Pass
2437	-8.74	8 dBm	Pass
2462	-8.20	8 dBm	Pass

N Mode

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
2412	-9.60	8 dBm	Pass
2437	-10.15	8 dBm	Pass
2462	-9.69	8 dBm	Pass

See Annex D for test results
