#### LS Research, LLC in Review

As an EMC Testing Laboratory, our Accreditation and Assessments are recognized through the following:

#### A2LA – American Association for Laboratory Accreditation

Accreditation based on ISO/IEC 17025: 2005 with Electrical (EMC) Scope of Accreditation A2LA Certificate Number: 1255.01

#### Federal Communications Commission (FCC) - USA

Listing of 3 Meter Semi-Anechoic Chamber based on Title 47 CFR – Part 2.948 FCC Registration Number: 90756

#### Industry Canada

On file, 3 Meter Semi-Anechoic Chamber based on RSS-212 – Issue 1

File Number: IC 3088-A

On file, 3 and 10 Meter OATS based on RSS-212 - Issue 1

File Number: IC 3088

#### U. S. Conformity Assessment Body (CAB) Validation

Validated by the European Commission as a U. S. Competent Body operating under the U. S./EU, Mutual Recognition Agreement (MRA) operating under the European Union Electromagnetic Compatibility —Council Directive 2004/108/EC (formerly 89/336/EEC, Article 10.2).

Date of Validation: January 16, 2001

Validated by the European Commission as a U.S. Notified Body operating under the U.S. /EU, Mutual Recognition Agreement (MRA) operating under the European Union Telecommunication Equipment – Council Directive 99/5/EC, Annex V.

Date of Validation: November 20, 2002 Notified Body Identification Number: 1243

| Prepared For: TASER | Name: Axon Flex Controller |

#### 2.0 Test Facilities

All testing was performed at:

LS Research, LLC W66 N220 Commerce Court Cedarburg, Wisconsin, 53012 USA

LS Research, LLC is accredited by A2LA (American Association for Laboratory Accreditation) to the requirements of ISO/IEC 17025, 2005 "General Requirements for the Competence of Calibration and Testing Laboratories".

LS Research, LLC's scope of accreditation includes all test methods listed herein, unless otherwise noted.

#### 3.0 Client Information

| Manufacturer Name:     | TASER                                              |
|------------------------|----------------------------------------------------|
| Address:               | 17800 N. 85 <sup>th</sup> St. Scottsdale, AZ 58255 |
| <b>Contact Person:</b> | Mark Hanchett                                      |

### 3.1 Equipment Under Test (EUT) Information

The following information has been supplied by the applicant.

| <b>Product Name:</b> | Axon Signal Equipped Controller |
|----------------------|---------------------------------|
| Model Number:        | T00062 REV X2                   |
| Serial Number:       | None (engineering sample)       |
| FCC ID:              | X4GS00832                       |
| IC:                  | 8803A-S00832                    |

#### 3.2 **Product Information**

Bluetooth Low Energy product utilizing internal chip antenna.

### 3.3 Modifications Incorporated In the EUT for Compliance Purposes

None noted at time of test

### 3.4 Deviations & Exclusions from Test Specifications

None noted at time of test

#### 3.5 Additional Information

EUT programmed for continuous transmit via FTDI to USB cable connected to laptop computer running Broadcom Blue Tool v 1.8.4.6. Test channels; Low Channel (2402 MHz), Mid Channel (2440 MHz), and High Channel (2480 MHz).

| Prepared For: TASER | Name: Axon Flex Controller |
|---------------------|----------------------------|
| Report: TR 315145   | Model: T00062 REV X2       |
| LSR: C-2246         | Serial: See Section 3.1    |

#### **4.0** Conditions of Test

Environmental:

Temperature: 20-25° C Relative Humidity: 30-60% Atmospheric Pressure: 86-106 kPa

Mains Voltage: 120VAC 60Hz

### 5.0 Test Equipment

All test equipment is calibrated by a calibration laboratory accredited by A2LA to the requirements of ISO 17025. For a complete list of test equipment and calibration dates, see Appendix A. Unless otherwise noted, resolution bandwidth of measuring instrument used during testing for given frequency range, see below.

| Frequency Range   | Resolution Bandwidth |
|-------------------|----------------------|
| 9 kHz – 150 kHz   | 200 Hz               |
| 150 kHz – 30 MHz  | 9 kHz                |
| 30 MHz – 1000 MHz | 120 kHz              |
| Above 1000 MHz    | 1 MHz                |

| Prepared For: TASER | Name: Axon Flex Controller |
|---------------------|----------------------------|
| Report: TR 315145   | Model: T00062 REV X2       |
| LSR: C-2246         | Serial: See Section 3.1    |

#### **6.0** Conformance Summary

The EUT was found to MEET the requirements as described within the specification of FCC Title 47, CFR Part 15.247, 15.207, Industry Canada RSS-247, Issue 1 (2015), Annex 8, RSS-GEN Issue 4 (2014).

### If some emissions are seen to be within 3 dB of their respective limits:

As these levels are within the tolerances of the test equipment and site employed, there is a possibility that this unit, or a similar unit selected out of production may not meet the required limit specification if tested by another agency.

LS Research, LLC certifies that the data contained herein was taken under conditions that meet or exceed the requirements of the test specifications. The results in this Test Report apply only to the item(s) tested on the above-specified dates. Any modifications made to the EUT subsequent to the indicated test date(s) will invalidate the data herein, and void this certification.

| General<br>Description of<br>Measurement | A direct measurement of the transmitted signal was performed at the antenna port of the EUT via a cable connection to a spectrum analyzer. An attenuator was placed in series with the cable to protect the spectrum analyzer. The loss from the cable and the attenuator were added on the analyzer as gain offset settings there by allowing direct measurements, without the need for any further corrections. The EUT was configured to run in a continuous transmit mode, while being supplied with typical data as a modulation source. |

| Additional<br>Notes                         | The power and frequency stability of the device was examined as a function of the input voltage available to the EUT. A Spectrum Analyzer was used to measure the RF output power and frequency at the appropriate frequency markers. Power was supplied by an external bench-type DC power supply and was varied from the nominal.  The power was then cycled On/Off to observe system response. No unusual response was observed, the emission characteristics were well behaved, and the system returned to the same state of operation as before the power cycle.  Below is data showing stability of the fundamental frequency.  Continuous transmit un-modulated used for this test.  EUT does not operate below 3.15-4.26 VDC, 3.7 VDC nominal |

### **Table**

|         | 3.15 VDC 3.7 VDC  |                | 4.26 VDC          | Max Drift |

| Description<br>of<br>Measurement     | 1) The antenna, cable, pre-amp, and other necessary measurement system correction factors are loaded onto the EMI receiver / spectrum analyzer when the measurements are preformed. The data is gathered and reported as the corrected values.  2) The EUT is placed on a non-conductive pedestal made of expanded polyethylene foam centered on a turn-table in the test location with the antenna at the test distance from the EUT  3) Maximum radiated RF emissions are determined by rotation of azimuth and scanning the sense antenna between 1 and 4 meters in height using both horizontal and vertical antenna polarities. Maximized levels are manually noted at degree values of azimuth and at sense antenna height. |                                               |                                               |                                 |

### **B.2.1** – Transmitter Band-Edge Restricted Band

| Manufacturer             | TASER                                                                                       |
|--------------------------|---------------------------------------------------------------------------------------------|
| Date                     | 7-29-15                                                                                     |
| Operator                 | Adam A                                                                                      |
| Temp. / R.H.             | 20 - 25° C / 30-60% R.H.                                                                    |
| Rule Part                | FCC 15.247/ 15.205 / 15.209<br>IC RSS-247 / RSS-GEN                                         |
| Measurement<br>Procedure | ANSI C63.10-2013 Section 11.12                                                              |
| Test Distance            | 3 meter                                                                                     |
| EUT Placement            | 150 cm height non-conductive table centered on turn-table , absorbers covering ground plane |
| Detectors                | Final Measurements: Peak / Max Hold, RBW 1 MHz, Average VBW 30Hz, Peak VBW 3 MHz            |
| Additional Notes         | EUT maximized in orientation, azimuth, and antenna height with maximum results reported.    |

### **Example Calculation:**

Limit  $(dB\mu V/m)$  – Reading  $(dB\mu V/m)$  = Margin (dB)

### **Average Table**

| EUT<br>Channel | Frequency<br>(MHz) | Average<br>Reading<br>(dBµV/m) | Average<br>Limit<br>(dBµV/m) | Average<br>Margin<br>(dB) |
|----------------|--------------------|--------------------------------|------------------------------|---------------------------|
| Low            | 2389.76            | 46.21                          | 54                           | 7.8                       |
| High           | 2498.73            | 46.86                          | 54                           | 7.1                       |

### **Peak Table**

| Description<br>of<br>Measurement     | <ol> <li>The LISN, cable, limiter, and other necessary measurement system correction factors are loaded onto the EMI receiver / spectrum analyzer when the measurements are preformed. The data is gathered and reported as the corrected values.</li> <li>The EUT is placed on a non-conductive pedestal at appropriate distance from ground planes and plugged into LISN. The LISN used has the ability to terminate the unused port with a 50Ω (ohm) load when switched to either L1 (line) or L2 (neutral).</li> <li>Maximum emissions are determined with peak detector and measurements at select points are made with quasi-peak and average detectors. Results are recorded and compared to limit.</li> </ol> |
| Example<br>Calculations              | Reported Measurement data = Raw receiver measurement + LISN Factor + Cable factor (dB) + Additional factor (when applicable)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### **Limits of Conducted Emissions at the AC Mains Ports:**

| Frequency Range                                                                   | Class B Limits (dBµV) |         |  |
|-----------------------------------------------------------------------------------|-----------------------|---------|--|
| (MHz)                                                                             | Quasi-Peak            | Average |  |
| 0.150 -0.50 *                                                                     | 66-56                 | 56-46   |  |
| 0.5 - 5.0                                                                         | 56                    | 46      |  |
| 5.0 – 30                                                                          | 60                    | 50      |  |
| * The limit decreases linearly with the logarithm of the frequency in this range. |                       |         |  |

### **Appendix C - Uncertainty Summary**

This uncertainty represents an expanded uncertainty expressed at approximately the 95 % confidence level, using a coverage factor of k=2.

Table of Expanded Uncertainty Values, (K=2) for Specified Measurements

| Measurement Type             | Particular Configuration             | Uncertainty Values |
|------------------------------|--------------------------------------|--------------------|
| Radiated Emissions           | 3 – Meter chamber, Biconical Antenna | 4.82 dB            |
|                              | 3-Meter Chamber, Log Periodic        |                    |
| Radiated Emissions           | Antenna                              | 4.88 dB            |
| Radiated Emissions           | 3-Meter Chamber, Horn Antenna        | 4.85 dB            |
| Absolute Conducted Emissions | Agilent PSA/ESA Series               | 1.38 dB            |
| AC Line Conducted Emissions  | Shielded Room/EMCO LISN              | 3.20 dB            |
| Radiated Immunity            | 3 Volts/Meter in 3-Meter Chamber     | 2.05 Volts/Meter   |
| Conducted Immunity           | 3 Volts level                        | 2.33 V             |
| EFT Burst, Surge, VDI        | 230 VAC                              | 54.4 V             |
| ESD Immunity                 | Discharge at 15kV                    | 3200 V             |
| Temperature/Humidity         | Thermo-hygrometer                    | 0.64°/ 2.88 %RH    |
